

Hand Poured Soy Candles with Cotton Wicks

Soy wax is non-toxic and non-carcinogenic. It contains no pesticides, herbicides or genetically modified material.

Soy wax is made from soy beans oil and is naturally biodegradable and water soluble.

Soy wax burns cleaner and cooler than paraffin wax, which means up to 50% longer lasting more than a paraffin candle.

1992 Michael Richards invented soy wax while was looking for a cheaper alternative to beeswax.

Nabila K's eco-friendly large soy candles have 65 hours of burn time and the small ones have 10 hours.

"Better to light a candle than to curse the darkness."
– Chinese Proverb
